---

*Hours of Operation*

**Monday–Friday ● 8 a.m. to 4 p.m.**

## Team Thera-Play Physical Therapy:

We specialize in working with children in developing and enhancing their mobility so they can safely participate in activities at home, school, and in their community. Our aim is to help children restore function and achieve independence through creative therapeutic play activities within a positive and supportive environment.

We treat children with a variety of diagnoses such as cerebral palsy, developmental delay, autism, brachial plexus injuries, brain injuries, torticollis, plagiocephally, toe walking, spina bifida, muscular dystrophies, and those status post tumor resection or status post tendon releases. We frequently see children after they have received botox injections or serial casting for spasticity management and for brace/orthotic management. We also assist in evaluating what the child's need may be regarding any adaptive equipment (such as walkers, gait trainers, standers, etc), assistive technology (such as wheelchair seating and positioning), or referrals to specialty clinics or school therapies. Thera-Play PT staff works closely with the OT and Speech staff for a comprehensive, holistic approach to outline the best plan of care for your child.

## Team Thera-Play Speech Therapy:

Our Certified Speech Language Pathologists work closely with pediatric patients and their caregivers to maximize communication skills. We specialize in early intervention with established and at-risk pediatric populations for verbal communication, non-verbal communication, oral-motor skills, feeding/swallowing difficulties, pre-speech social skills as well as disorders of hearing, voice and fluency. We offer comprehensive evaluation and treatment for children of all ages and communicative skill levels

including expressive and receptive language deficits, articulation impairments, and social

communication deficits often seen in autism spectrum disorders. Children and families are offered individualized quality play-based therapy that relates to specific communication needs and offers real-life advice and solutions for families.

## Team Thera-Play Occupational Therapy:

Occupational Therapy assists children in developing skills to engage in every day life. These skills and abilities allow us to participate in our daily “occupations.” For children, occupations include play, self care, learning, social skills and socialization. At Team Thera-Play, we help children build skills to develop into functional adults. We provide pediatric occupational evaluations, intervention and consultation in the following areas: Self care and hygiene, fine motor skills, handwriting difficulties,

sensory processing and integration, developmental delay, environmental adaptations and splinting. We have experience in offering specialized treatment programs including Handwriting Without Tears®, How does Your Engine Run?® and the Winebarger Brushing Program®.
